

Environmentally Friendly Personal Use Products

At Mia Pera Hotel, we prioritize protecting nature and Istanbul's unique cultural heritage. Therefore, we want to inform our guests about the environmental impact of personal use products.

Toxic Sunscreens

Chemicals such as oxybenzone, octinoxate, and octocrylene, contained in some sunscreens, can be particularly harmful to marine and aquatic ecosystems. These substances can damage coral reefs and disrupt the balance of aquatic life.

👉 **Solution:** We recommend choosing "reef-safe" or "eco-labeled" sunscreens. Mineral-based products (containing zinc oxide and titanium dioxide) are environmentally friendly alternatives.

Medicines and Personal Chemicals

Some medications and cosmetics can harm the environment when they enter the water system through sewage after use.

👉 **Solution:** Never pour your medications down the sink or toilet. You can ensure that unused or expired medications are disposed of properly by returning them to pharmacies.

Your Contribution Matters

- You can help protect the ecosystem by choosing environmentally friendly products.
- You can prevent water pollution by using the correct disposal methods.
- Small choices make a big difference.

At Mia Pera Hotel, we are happy to take steps towards an environmentally friendly future together with our guests. 🌍💚
